

PRODUCT SUITE OVERVIEW

Facility Product Suite

Next level facility software for waste, quarry and other facility applications

- ✓ Provide operators, who are working in sometimes difficult and remote locations, a **Point-of-Sale (POS) interface to capture and process transactions.**
- ✓ **Interface with hardware devices** found at facilities.
- ✓ Ensure **un-attended sites consistently and accurately capture data.**
- ✓ Record data to **meet state and national regulatory requirements.**
- ✓ **Store data in the cloud**, removing the requirement for local server infrastructure and the reliance on specialised in-house resources to support it.
- ✓ Give management teams access to data and the ability to **manage information and users across multiple facilities** and locations and plan for the future.

Why is it better?

Always up-to-date software

Offering a cloud-based software solution combined with the offline capabilities of deployed software. Data is secure and backed-up, software versions are deployed more often and with ease, and data is synchronised between remote facilities and central admin.

Accurate Reporting

Providing admin and management teams with near real-time data that can be used to manage your business. Let us help you with data setup to ensure you get the most from the system.

A local support team

Mandalay's local and dedicated support team is available for assistance and troubleshooting. With significant industry experience, the Mandalay Consulting Team can provide guidance through more complex issues.

Regulatory compliance

A system that complies with various EPA and regulatory requirements such as state-based regulatory reporting and HVNL. As requirements change, the system is updated to suit.

Integration with finance systems

Integration with finance systems will assist with payment processing, account management and reporting. Data can be exported in a format specific to your requirements.

Facility Product Core

Standard inclusions within the Facility Core Product include Ticketing, Data Administration Support Services, Transaction Search and Standard Reporting, available via a subscription licensing model.

- ✓ A Facility Transactional System that will issue, track and manage tickets, and process payments.
- ✓ Client profile and tracking, including controlled vehicle access management.
- ✓ Built-in product coding and tracking tailored to waste industry needs and regulations.
- ✓ Personalised customer service training and ongoing support delivered by an Australian based support team.
- ✓ A hybrid cloud solution delivering both locally deployed and cloud-hosted components ensuring the system can operate offline (for up to 60 days).

Extension Product Range

Working in conjunction with Mandalay's range of extension products your data can be transformed into powerful information. Each product is available via an additional subscription, once the Facility Core Product has been installed.

EFTPOS: Designed to integrate the Facility Core Product with EFTPOS terminals via a third-party product called Linkly (PC-EFTPOS).

Image Capture: Automatically capture images from cameras installed at your facility. Images are recorded at the point a weight is stored or when a transaction is completed, allowing you to verify transactional data.

License Plate Recognition (LPR): When used in the right situation, LPR can offer streamlined vehicle selection and allow some automation of basic ticketing and access control functions.

Site-Based Pricing: Typically, applicable to larger organisations managing multiple sites as separate business units. Site-Based Pricing will allow pricing to be set at the site level.

Multi Weigh: Allow multiple products in a single load to be added to a single transaction with a net weight recorded against each product.

UAT Environment: A UAT Environment (tenancy) allows the ability to conduct User Acceptance Testing before migrating data into the production tenancy. While included with new implementations, if customers wish to extend access to UAT Environments post go live, an additional subscription is required.

Data & Finance Import / Export: Integration with finance systems will assist with payment processing, account management and reporting. Data can be exported in a format specific to your system requirements.

API Suite: The naus API Suite is made up of multiple API products where each is designed for a specific purpose and generally for a specific domain.

Premium Facility Analytics & Reporting: A variety of analytics and reporting capabilities driving insights and actions and accessed via the naus Intelligence Platform. Offering a combination of dashboards and detailed reporting capabilities, Facility Analytics and Reporting offers a suite of tools giving your organisation the big picture view across your facility(s) down to the minute detail of individual transactions.
