

PRODUCT SUITE OVERVIEW

Facility Product Suite

Next level facility software for waste, quarry and other facility applications

Everything you need to efficiently run and manage your facility, all within a single standard subscription.

- ✓ **On-site POS Ticketing** application to record transactions and take payments.
- ✓ **Cloud based Administration** to create and manage master data.
- ✓ **Cloud based Facility Analytics & Reporting** to view, interact with, and export your data.
- ✓ **Centralised cloud data storage** using Microsoft Azure Australian data centres.
- ✓ **Integrations** to your on-site hardware.
- ✓ Release of **continual upgrades and enhancements**.

Why Choose the Facility Product Suite

Save time and money while effectively maintaining and growing your operations with a secure and reliable system that meets the needs of your organisation now and into the future.

- **Transaction Capture:** Capture and process transactions, record movements in and out of your sites and process payments for your facilities via an easy-to-use interface.
- **Data Back-Up:** Your data is stored centrally using Microsoft Azure Australian data centres with geo-redundancy backup.
- **Always Up-To-Date Software:** Products are constantly improving and evolving, with new features and enhancements in development on a regular basis to keep your organisation future-ready.
- **Regulatory Compliance:** Record data to meet various EPA and regulatory requirements such as state-based regulatory reporting and HVNL.
- **Seamless Integration:** Seamlessly integrate with facility infrastructure such as weighbridges, boom gates and traffic lights, plus finance systems for efficient accounts processing.
- **Superior Data Security:** Underpinned by our ISO27001 accreditation, your data is securely stored and backed up in the cloud.
- **Offline Capability:** The transactional system can operate offline for up to 60 days, thanks to Mandalay's hybrid cloud solution.
- **Data Access and Management Across Facilities:** Data is synchronised between facilities and central admin allowing Administration teams to manage data across multiple facilities.
- **Extensive Data and Reporting:** Transform your data into powerful information with the extensive range of reporting tools that are available.
- **Australian Based Support Team:** Mandalay's dedicated Australian-based support team is available for assistance and troubleshooting.

Your Facility Transaction System

Giving you access to all applications necessary to record and report on transactions at one or more facilities, all in one platform. Applications include:

(Optional) Extension Products

-  **Premium Facility Analytics & Reporting:** Extend on core reporting functionality providing access to a range of additional analytics and reporting features.
-  **EFTPOS Integration:** Integrate Ticketing with Linkly compatible EFTPOS terminals, allowing ticket price information to pass automatically between terminals and the ticketing record.
-  **Image Capture:** Automatically capture images of inbound and outbound vehicles and loads against each weighed movement transaction record.
-  **License Plate Recognition (LPR):** Automatically identify vehicle license plates entering and leaving facilities to achieve automation of basic ticketing and access control functions.
-  **Access Control:** Allow the movement of vehicles into and out of a facility without the need to record a transaction. Combine with LPR to manage access to and from facilities.
-  **Multi Weigh:** Allow multiple products in a single load to be added to a single transaction with a net weight recorded against each product.
-  **Site Based (Enterprise) Pricing:** Manage distinct product prices per site or per client category. Ideal for larger organisations managing multiple sites as separate business units.
-  **Finance Integration for Invoicing:** Integration solutions for invoicing provide a simple way to transfer data to or from Facility Core Ticketing via flat file or API.
-  **APIs:** Offers a range of API's that provide a variety of capabilities such as importing client data, extracting a data load for warehousing, and creating bookings.
-  **Facility Mobile Application:** Accurately record individual waste materials, quantities and weights at the point of drop off to enable accurate user pays charging at your facility.
-  **Automation (Driver Control Station):** Offer partially or fully automated transaction processing through basic or advanced driver control stations (DCS).
-  **UAT Environment:** Can be made available post go-live for customers to test business processes and train staff without impacting the production environment.
